

A - series

Automatic composite loading and unloading manipulator
+plate storage warehouse (side)

Performance Profile

The system consists of a set of three-dimensional storage warehouse, a set of bilateral gantry truss, a set of loading and unloading composite truss manipulator, a finished material truck, PLC control system, and a laser cutting machine to form a sheet metal automatic production unit, can effectively guarantee product quality, improve production efficiency, reduce production costs.

Equipment technical parameters

Specification	3015/4015/4020/6015/6020mm
Number of floors	8-13
Load per layer	3T/5T
Maximum load	300KG-3000KG
Air consumption	1.5m³/min
Air source	0.6-0.7Mpa
