

- Tower Plus

Automatic two tower plate storage warehouse

Performance Profile

It can achieve centralized and three-dimensional storage of plates, automatically detect the weight, automatically put materials into storage and take them out of storage. It is controlled by PLC and touch screen, which is safe and efficient, has a large load-bearing capacity, and features two loading modes including forklift and overhead crane. What's more, it doubles the storage capacity. One electric discharging device can serve two material warehouses, and it can realize side and rear discharging. It can effectively ensure the product quality, improve the production efficiency and reduce the production cost.

Equipment technical parameters

Specification	3015/4015/4020/6015/6020mm
Number of floors	8-13
Load per layer	3T/5T
mode of movement	linear guide rail + chain
transmission mode	chain drive
vertical lifting speed	9m/min
inlet and outlet speed	12m/min
plate support	optional selection
